

Stainless Steel Insulated Chimneys

- **DOUBLE WALLED** sandwich type **CHIMNEYS** with stainless steel outer and inner layers and rock wool insulation in between.
- They are the most suitable for exhaust and hot gas extraction from natural gas or oil boilers, fireplaces, heating, ventilation and operation in corrosive oxidizing environments.
- Burning performance is improved with double walled chimneys, because the draw in the chimney is increased and exhaust gas condensation is minimized.
- The connections of the chimneys and their accessories are absolutely tight with special type clips.
- The chimneys are available in **1, 2 and 3 meters** pieces, along with all necessary accessories such as: 90° and 45° corners, T pieces, wall hangers, hats etc.
